

Ordinary Objects Cleverly Interact With Simple Line Drawings

By [katie hosmer](#) January 20, 2014

The world is filled with possibilities according to clever Ecuador-based artist Javier Perez. From the graphic designer's perspective, any little object can be redefined to communicate a whimsical idea that will make just about anybody smile.

Perez first began his *Instagram Experiments* last fall with two forks, some loose change, and a drinking straw, among other things, and he has yet to run out of playfully clever ideas. He uses objects like a single grape on a stem or a thumbtack as the foundation for his idea, and he then pairs the three-dimensional shapes with a simple ink line drawing to complete the concept.

Thanks to his expressive imagination, Perez brings to life a small scrap of food or a static office supply by visualizing his concepts, and then creating the clever interactions between elements that result in this delightfully entertaining series.
